|--|----|
| Предисловие / Preface..... | 12 |
| Пленарное заседание / Plenary session..... | 14 |
| | |
| <i>Arakelyan A.A., Avagyan A.A., Yeritsyan H.H., Tarasyan N.H., Nersisyan A.H., Uloyan H.R.</i> | |
| OPEN ACCESS TO SPATIAL DATA AND KNOWLEDGE IN EARTH SCIENCES | |
| THROUGH VIRTUAL GEOSCIENTIFIC ENVIRONMENT FOR ARMENIA | 15 |
| | |
| <i>Chesalov L.E.</i> | |
| NATIONAL DATA REPOSITORY: CHALLENGES AND SOLUTIONS | 16 |
| | |
| <i>Emmanuel John M. Carranza, Paulo Miguel Haddad-Martim, Carlos Roberto de Souza Filh.</i> | |
| ANALYSES OF SPATIAL PATTERN OF MINERAL DEPOSITS: EXAMPLES IN THE | |
| CARAJÁS MINERAL PROVINCE, BRAZILIAN AMAZON..... | 16 |
| | |
| <i>Levin V.A., Aleksanina M.G.</i> | |
| REGIONAL REMOTE SENSING OF ENVIRONMENT: TECHNOLOGIES AND USERS | |
| | 17 |
| | |
| <i>Lyubushin A.A.</i> | |
| AMBIENT NOISE OF THE EARTH AND TRENDS OF GLOBAL SEISMIC DANGER | |
| | 17 |
| | |
| <i>Ruzhnikov G.M., Klyuchevskii A.V., Paramonov V.V., Mikhailov A.A., Fedorov R.K., Dem'yanovich V.M., Demberel S.</i> | |
| SERVICE-ORIENTED INFORMATION AND ANALYTICAL THE SYSTEM OF | |
| ESTIMATION OF INFLUENCE OF THE LITHOSPHERE MODEL ON DYNAMIC | |
| PARAMETERS OF ROCKY SOIL OSCILLATIONS FROM EARTHQUAKES OF | |
| SOUTHERN BAIKAL REGION | 18 |
| | |
| <i>Yakubailik O.E., Kadochnikov A.A., Tokarev A.V.</i> | |
| THE SYSTEM OF OPERATIONAL PROCESSING OF SATELLITE REMOTE | |
| SENSING DATA IN KRASNOYARSK SCIENCE CENTER OF RUSSIAN ACADEMY | |
| OF SCIENCES..... | 19 |
| | |
| <i>Zhizhimov O.L.</i> | |
| DIGITAL REPOSITORIES FOR EARTH SCIENCES..... | 20 |
| | |
| <i>Доклады спонсоров Конференции / Reports of Conference Sponsors</i> | |
| | |
| <i>Sergeeva M.A / SCANEX Group (Russia)</i> | |
| REAL-TIME GEOSERVICES TO ADDRESS APPLIED OBJECTIVES..... | 21 |
| | |
| <i>Shulga E.S. / LLC MICROMINE RUS (Russia)</i> | |
| THE ROLE OF GEOLOGICAL AND MINING INFORMATION SYSTEM IN DEPOSIT | |
| DIGITAL TWIN CREATION | 22 |
| | |
| Научные сессии / Scientific Sessions..... | 23 |
| Первая сессия / First session | 23 |
| Особенности данных в науках о Земле: новые концепции и методы, инструменты их | |
| сбора, интеграции и обработки в различных информационных системах, в том числе и в | |

системах с интенсивным использованием данных. Открытый доступ к научным данным в области наук о Земле / Data peculiarities in Earth Sciences: new concepts and methods, tools for their collection, integration and processing in different information systems, including systems with intensive use of data. Open access to scientific data and knowledge in Earth Sciences.

THE USE OF GIS FOR MINIMIZATION OF THE TECHNOGENIC IMPACT ON THE ENVIRONMENT (ON THE EXAMPLE OF THE KIZEL COAL BASIN)

Berezina O.A., Maksimovch N.G., Meshcheriakova O.Yu.

Institute of Natural Sciences of Perm State National Research University (Russia)

berezina.olga16@gmail.com, olgam.psu@gmail.com

The Kizel coal basin (KCB), located in the east of the Perm Region (Russia), has been developed for more than 200 years.

The territory of the KCB is characterised with complex mining conditions determined first of all by high watering and intensive amount of karst in rocks and high sulphide sulfur concentration.

The shutdown of mines at the end of the XX century entailed a number of environmental problems, the main of which are spills of acid mine water, up to 75 million m³ / year (with an average value of 15-25 million m³ / year), with a content of iron, aluminum, manganese, beryllium hundreds and thousands of times higher than MPC at pH 2-3.

The results of long-term monitoring were integrated in a problem-oriented basin geoinformation system published in the public domain (<http://kub.maps.psu.ru>).

The main purpose of the developed web-GIS is to organize monitoring and support the adoption of managerial decisions aimed at improving the environmental situation. The web-GIS of the KCB is based on the basin principle, in which river catchments are used to assess the state of ecosystems in the study area. Based on the GIS, geofiltration models were built and a set of recommended measures to minimize and eliminate spillage of mine water was developed.

A comprehensive restoration of the natural environmental components of the territory of the KCB, in accordance with the proposed measures, will significantly improve the overall ecological situation, positively affect the socio-economic conditions of the territory and significantly increase the tourist and investment attractiveness of the region.

The reported study was funded by RFBR and Russian Geographical Society according to the research project № 17-05-41114 и 17-45-590793.

Кизеловский угольный бассейн (КУБ), расположенный на востоке Пермского края (Россия), разрабатывался более 200 лет.

Территория КУБа отличается сложными горно-геологическими условиями, в первую очередь, высокой обводненностью и интенсивной закарстованностью пород, а также высоким содержанием сульфидной серы.

Прекращение работы шахт в конце XX века повлекло за собой ряд экологических проблем, основной из которых являются изливы кислых шахтных вод, объемом до 75 млн м³/год (при среднем значении – 15-25 млн м³/год), с содержанием железа, алюминия, марганца, бериллия в сотни и тысячи раз превышающим ПДК_{хп} при pH 2–3.

Полученные результаты многолетнего мониторинга были интегрированы в проблемно-ориентированной бассейновой геоинформационной системе, опубликованной в открытом доступе (<http://kub.maps.psu.ru>).

Основное назначение разработанной веб-ГИС – организация мониторинга и поддержка принятия управлеченческих решений, направленных на улучшение экологической ситуации. В основу веб-ГИС КУБа положен бассейновый принцип, при котором для оценки состояния экосистем исследуемой территории используются водосборы рек. На основе ГИС были построены геофльтрационные модели и разработан комплекс рекомендуемых мероприятий по минимизации и ликвидации изливов шахтных вод.

Комплексное восстановление природных компонентов окружающей среды территории КУБа, в соответствии с предложенными мероприятиями, позволит существенно улучшить общую экологическую обстановку, положительно повлияет на
